Overview

This is a 32 Mbit non-volatile memory module that offers a solution for projects where space, pins and power are limited. It uses the W25Q32JVSSIQ chip, the 25Q series shows flexibility and performance beyond the usual "Serial Flash" devices. They are ideal for the "code shadowing" technique, executing code directly from SPI, storing records, text and data.

Technical specifications

Interface: **SPI**

Capacity: **32M-bit / 4M-byte**

Operating voltage: **2.7~3.6V**

PCB dimensions: **17mm x 10.5mm**

Legal disclaimer notice

This development board is considered a subassembly in accordance with FCC CFR Title 47 §15.101(e):

[https://www.ecfr.gov/current/title-47/chapter-I/subchapter-A/part-15/subpart-B/section-15.101#p-15.101\(e\)](https://www.ecfr.gov/current/title-47/chapter-I/subchapter-A/part-15/subpart-B/section-15.101#p-15.101(e))

The device does not have a standalone functionality and does not include an enclosure or power supply.

The device is mainly intended for development and prototyping but it can be integrated into a product. In this case it is the responsibility of the developer/manufacturer to obtain all the necessary certifications.
